

SH-1

“QUICK MOUNT” SOUNDHOLE PICKUP by GMF FOR STEEL STRING ACOUSTIC GUITARS INSTALLATION AND OWNER’S MANUAL

Congratulations on your purchase the instant mounting (and unmounting), SH-1 sound hole pickup. This Great-looking maple pickup will look fantastic on your guitar. More importantly, it sounds great. The SH-1 will passively amplify your sound without anything to detract from it. The single coil design gives a bright clean tone that is resistant to feedback. The SH-1 fits any acoustic guitar with a sound hole diameter of 3.85 to 4.10 inches. The proprietary shaped magnetic field insures great string balance with most acoustic string sets.

Easy Installation:

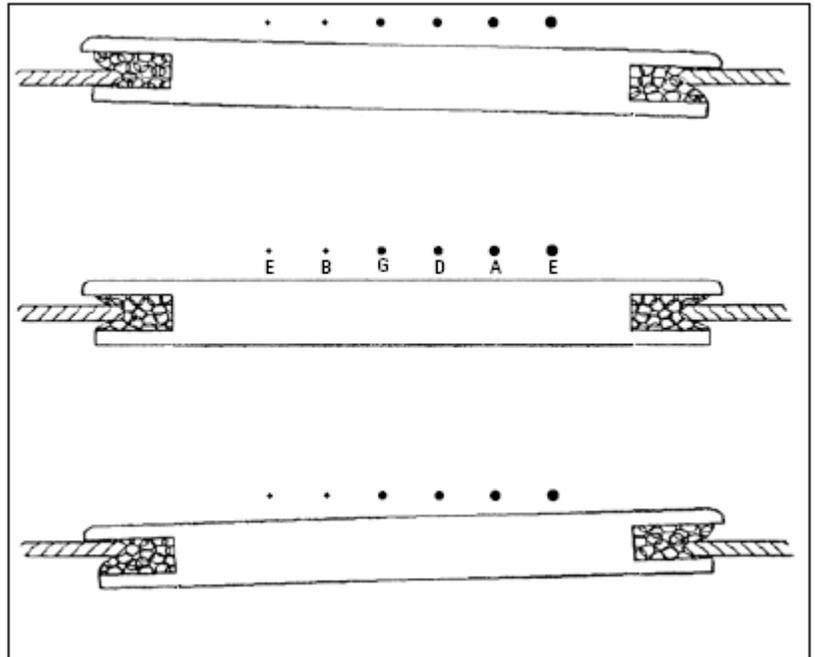

- 1) Orient the SH-1 so the cable exits towards the bridge
- 2) Slip the SH-1 into the sound hole on the high E string side
- 3) Hook one edge of the SH-1 on the sound hole on the low E side
- 4) Push the SH-1 towards the bass strings until the bottom lip clears the sound hole on the high E side
- 5) Allow the SH-1 to spring into place, capturing the sound hole on the high E side
- 6) Adjust the height on the bass and treble side to taste (See below)
